

POTS REPLACEMENT SERVICES

All-In-One POTS Replacement Services

Future-proof your business and transition your traditional analog telephone lines to a digital, network-based solution from net2phone — with an uptime record of **99.99%**.

Modernize your critical communications with a single provider

Traditional Plain Old Telephone Service (POTS) lines are now unsustainable due to aging infrastructure, high maintenance costs, and regulatory pressure. The FCC issued Order 19-72A1, pushing to phase out and decommission copper lines — making POTS replacement mandatory to ensure reliability and eliminate downtime, especially in emergency situations. Systems that power fire alarms, security panels, elevators, and medical alert devices require sustainable solutions to ensure proper safety protocol.

Designed to integrate seamlessly with your existing analog equipment, net2phone can modernize your critical communications and fulfill all your business communication needs with AI-powered cloud solutions.

Experience the net2phone **difference**

Reliable critical communications — keep fire, elevator, and other emergency lines operational with redundancy and failover systems.

Seamless implementation — go live in minutes or hours, not weeks, with onboarding, training, and resources to get your team up to speed.

Cost savings — reduce costs by 30–50% compared to traditional copper lines.

Scalability — scale your system up or down with business needs, staffing, or seasonality.

Mobility — connect from anywhere with real-time syncing across devices.

Key capabilities

Digital POTS technology

Replace your legacy POTS system with a communications platform you can trust – with multi-carrier LTE support and automatic failover.

Compatibility

net2phone supports existing protocols like Contact ID, SIA, and Bosch RPS, ensuring seamless integration with current systems.

Multi-carrier support

net2phone uses multiple wireless carriers with automatic failover to the strongest available signal, reducing downtime by up to 95%.

Service management portal

A centralized platform for real-time monitoring, management, and reporting – offering 24/7 visibility into system performance.

Advanced calling features

Get call forwarding, transferring, welcome greetings, call recording, call queues, and more.

All-in-one communication

Connect via voice, video, business SMS, and internal messaging from one AI-enhanced platform – anywhere, with real-time syncing across devices.
